DETAIL SPECIFICATION SHEET

CABLE, ELECTRICAL, TYPES LSTCJX, LSTCKX AND LSTCTX

This specification is approved for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the product described herein shall consist of this specification sheet and the issue of MIL-DTL-24643 listed in that issue of the Department of Defense Index of Specifications and Standards (DoDISS) specified in the solicitation.

REQUIREMENTS:

Qualification required.

Construction (watertight with circuit integrity)

- First - Stranded conductor, uncoated (see table I for size and stranding).
- Second - Extruded silicone rubber insulation (see table I for dimensions).
- Third - Glass braid, color identified (see table II). (see table I for dimensions).
- Fourth - Transparent braid covering. Two conductors cabled together to form a pair with lay not greater than 2.25 inches. For LSTCJX, one iron conductor and one constantan conductor. For type LSTCKX, one chromel and one alumel conductor. For LSTCTX, one copper conductor and one constantan conductor. Type J, K and T thermocouple conductors shall be in accordance with ANSI MC96.1. Color code applied by method 4, see table II for color code sequence.
- Fifth - The specified number of pairs (see table I) cabled together with a lay not greater than 10 inches. Fillers saturated with non-charring silicone base compound to form a firm, well-rounded assembly.
- Sixth - A binder tape applied helically with overlap.
- Seventh - Silicone rubber jacket colored orange or red. (see table I for thickness)
- Eighth - Braided metal armor.
