

# UL 1371, 1538 wire—extruded PTFE insulation (low voltage)

UL 1371 and 1538 wires have thin-wall extruded PTFE (Polytetrafluoroethylene) insulation for weight and space savings. The very thin wall insulation of these wires restricts their usage to low-voltage applications.

## Performance:

**Voltage rating:** UL 1371: Not specified by UL;  
UL 1538: 125V.

**Temperature rating:** 105° C.

**Ordering Information:** Specify Thermax part number, UL style, and color. Thermax part numbers shown below meet specifications for UL 1371 and UL 1538 styles.

For nickel-plated copper conductor, change **XT** in Thermax part number to **XTN**, **TE** to **TEN**, or **MT** to **MTN**.

For optional silver-plated high-strength copper conductor, change **XT** in Thermax part number to **XTTF**, **TE** to **TETF**, or **MT** to **MTTF**.

For optional nickel-plated high-strength copper conductor, change **XT** in Thermax part number to **XTTFN**, **TE** to **TETFN**, or **MT** to **MTTFN**.

## Construction Details

**Insulation:** Extruded PTFE, wall thickness:  
8 AWG: .020" (.51 mm);  
10–15 AWG: .013" (.33 mm);  
16–19 AWG: .008" (.20 mm);  
20–36 AWG: .0055" (.14 mm).

**Conductor:** Silver-plated copper.

**Colors:** Available in 10 standard colors (see page 92).

**Identification:** Surface printed as required by UL.

**Options:** Nickel-plated copper conductor;  
nickel-plated high-strength copper alloy conductor;  
silver-plated high-strength copper alloy conductor.
