

# Smart Choices for Healthcare Facilities

## The Smart Choice for Healthcare Facilities

With over 100 years experience and a reputation for industry-leading reliability, innovation and value, we're the brand standard for the country's premier healthcare facilities. We've created smart solutions for lobbies, examination rooms, cafeterias and more. Our state-of-the-art hospital grade wiring, high speed data connections, and energy-saving lighting controls contribute to a safer, more efficient healthcare environment while improving energy conservation.

Today, Leviton is the market share leader in GFCIs as well as other intelligent electrical-safety devices in public health facilities. Our comprehensive product line of electrical, lighting, energy management, electronic, and network devices—over 26,000 products in all—features many engineered specifically for healthcare industry needs. We're also the undisputed leader in meeting today's energy codes. Nine out of 10 U.S. buildings use our low-voltage products.

Supported by over 600 patents and a fully integrated service approach, Leviton is the go-to resource for the world's top facilities.

A photograph of a modern hospital lounge. The room features large, floor-to-ceiling windows with dark frames, offering a view of an outdoor courtyard with stone walls and greenery. The interior walls are clad in large, rectangular, light-colored stone tiles. The floor is made of large, light-colored square tiles. In the foreground, there are several green upholstered armchairs with wooden frames and small round wooden tables. The lighting is bright and natural, coming from the windows.

## 60% of U.S. hospitals are considered structurally and electrically obsolete...

This fact further drives the need to refocus on designing quality facilities that incorporate new technologies, and meet critical design objectives such as energy savings, cost reduction, and code compliance while planning for the future.

# From Admitting to Outpatient

## Healthcare Energy and Network Solutions that Work Harder

Contractors rely on Leviton solutions for today's healthcare facilities. Our lighting energy management systems, measurement and verification solutions and energy efficient products help Hospitals and Healthcare Centers earn LEED certification and meet federal, state and local energy codes.

The Leviton line of Lev-Lok modular wiring devices is the perfect solution for builders and contractors needing to reduce construction and labor costs without sacrificing quality and performance.

Leviton's line of hospital grade devices meets NEC and NFPA requirements and is backed by superior technical service, quality assurance, engineering, and research and development.

When using Leviton's leading-edge copper and fiber connectivity—with the support of Leviton's experienced specification team—medical facilities can safely rely on the instantaneous transfer of critical data across their networks.

# Engineering World-Class Healthcare Solutions for Every Application

## **Nurse Stations and Building Support**

Nurse stations, administrative areas, conference and break rooms, utility and storage rooms.

## **Patient Care and Exam Rooms**

Operating rooms, emergency rooms, radiology, labs and specialty care areas.

## **Lobbies, Offices and Waiting Areas**

Lobbies, hallways, gift shops, stairways, offices and waiting rooms.

## **Kitchens, Restrooms and Hydrotherapy Areas**

Kitchens, restrooms, laundry rooms, physical and hydrotherapy units.

## **Data Centers and Telecommunications Rooms**

Maintenance, telecommunications and data centers.

## **Outdoor Areas and Parking Facilities**

Indoor/outdoor parking areas, walkways, emergency areas, driveways and loading docks.

# Nurse Stations and Building Support Areas

Better care for patients begins with making certain those attending to them are well-equipped in an effective workspace. With a wide array of Hospital Grade plugs and receptacles to keep caregivers—and receivers—safe, as well as the network technologies that ensure connectivity to records and other necessary data, Leviton is a trustworthy partner enabling doctors and nurses to maintain their attention and priorities where most needed.

Building support areas are also critical energy wasters. From utility rooms to storage, conference and break rooms, Leviton occupancy sensors can provide significant energy savings by turning off lights during unoccupied period amounting to literally hundreds of rooms where the lights could be left on for hours or even days.

1. Lev-Lok® Hospital Grade Receptacles
2. Wall, Ceiling and Box Mounted Occupancy Sensors
3. Angled Plugs and Connectors
4. eXtreme® CAT 6A Network Connectivity

# Patient Care and Exam Rooms

Hospital medical equipment is one of the largest categories of energy consumers: patient monitoring, diagnostics, medical imaging, X-ray, surgical, therapeutic, life support and laboratory devices. MRI machines and CT scanners typically represent the largest single plug load, while patient monitors and EKGs draw moderate power, more frequently.

## **Smart Technology that Saves Lives**

Electrical safety is essential in patient bedrooms, examination rooms, treatment rooms, emergency rooms —anywhere a patient will come in contact with a nurse call system, electric beds, examination lamps, phone and televisions, or wherever care is given. Even more important is safety in critical care areas like the ICU, delivery rooms, special care units, and operating rooms where patients are subjected to invasive procedures and connected to line-operated electro-medical devices.

1. Medical Grade Power Strips
2. Vizia +® Dimmer
3. DuraPort® Industrial Network Connectivity
4. Lev-Lok® Hospital Grade Receptacles for MRI Equipment
5. Lev-Lok® Illuminated Hospital Grade Receptacles

# Lobbies, Waiting Rooms and Offices

Particularly in public areas, healthcare facilities need to focus on energy savings, equipment protection and the safety of visitors. Lobbies, waiting rooms and offices make the all-important first impression. Aesthetically pleasing devices that provide safety and are easy to maintain can help achieve that goal.

Tamper-Resistant receptacles provide visitors, especially children, with safety from electrical shock. The sleek look of Leviton's devices and wallplates can replace outdated products to provide an attractive image in your public areas while providing the safe and reliable equipment protection.

1. Tamper-Resistant Surge Receptacles
2. Hospital Grade Tamper-Resistant GFCI
3. Multimedia Outlet System
4. Multi-Tech Occupancy Sensor
5. USB Charger/Tamper-Resistant Receptacle

# Kitchens, Restrooms and Hydrotherapy Areas

The most critical area for nutrition, rehabilitation and comfort is also the source of the highest plug load densities: the kitchen. Electrical devices in food preparation zones, restrooms, laundry rooms and hydrotherapy areas are often exposed to moisture and water. Kitchen employees face a higher risk of

electrocution because water spills and grease fires increase the dangers of coming in contact with electricity. Leviton's complete range of GFCIs, watertight and dust-tight devices in the DuraPort® and Wetguard® lines help prevent hazards, keep patients and medical staff safe and keep your equipment running longer.

1. Wetguard® Watertight Devices
2. Hospital Grade Guide Light Slim GFCI Duplex Receptacle
3. Box Mounted, Multi-Tech Occupancy Sensor
4. Ceiling Mount Occupancy Sensor

# Data Centers and Telecommunications Rooms

Often having their own power and cooling systems, healthcare facility data centers and telecommunications rooms are always a source of major energy use. These technology centers are rapidly growing with the increasing demand for electronic/online patient data processing and storage.

As technology continues to evolve across the healthcare organization, between buildings and across cities, Leviton products ensure seamless expansion and upgrades while conserving one of the most critical operations: electrical power.

## verifEye™

Smart Submetering Solutions

### VerifEye™ Submeters = Smart Energy Management

Leviton's comprehensive line of Submetering Solutions can help create a comprehensive energy management strategy. We redefine ROI as the "Rewards of Information". With accurate data you can finally understand true energy consumption. Our meters monitor energy usage and power consumption effectively and affordably. With the addition of precise energy measurement and verification systems, facility managers now have an integrated solution for achieving their sustainability goals and green building initiatives.

1. VerifEye™ Submetering System
2. Opt-X Ultra® Fiber Enclosures
3. Power Distribution Units
4. C1 Ultra Patch Panels
5. Pre-Terminated Trunk Cables
6. Secure RJ Port Security
7. Secure RJ Port Blocker and Extraction Tool
8. 50A Non-NEMA Locking Plugs and Connectors

# Maintenance, Outdoor Areas and Parking Facilities

Patient and staff safety is important both inside and outside your facility. Commercial lighting keeps large outdoor areas illuminated, giving patients and staff peace-of-mind. And outdoor electrical outlets are a great way to increase the versatility of your outdoor spaces. Whether using it to power electric lawn equipment, video surveillance protection, lighting or other equipment, there

is a virtually unlimited number of uses for these outlets. As a pioneer in eco-conscious electric vehicle supply equipment, Leviton continues to help develop sustainable healthcare environments, making its line of electric vehicle supply equipment (EVSE), including electric vehicle chargers, available for installation in your parking facilities. Outdoor areas and parking facilities never looked so green.

1. GreenMAX® Relay Panels
2. EZ-Max® Relay Panels
3. Outdoor Weather-Resistant (WR) GFCI Receptacles and While-In-Use Covers
4. Industrial, Hospital Grade Locking Plugs and Connectors
5. Key Locking Switches
6. Safety Disconnect Switch
7. Evr-Green® Electric Vehicle Charging Stations

# NFPA Code Summary

## NEC Article® 210.8(B)(1 through 5)

### Ground-Fault Circuit Interrupter Protection for Personnel - Other Than Dwelling Units

#### Edition

**2008:** All 125-volt, single-phase, 15- and 20-amp receptacles installed in bathrooms, kitchens, rooftops, outdoor locations (with exceptions) and within 6' of sinks shall have ground-fault protection.

**2011:** Expanded requirement to include indoor wet locations, locker rooms with associated showering facilities, garage, service bays and similar areas.

**2014:** Expanded to all commercial garages, not just those where maintenance is expected to be performed.

#### Suggested Solutions

**Standard & TR:** N7599-HG, N7899-HG, X7599-HG, X7899-HG

**Guidelight:** X7592-HG, X7892-HG

**Weather-Resistant:** WT599-HG, WT899-HG

**Lev-Lok®:** M7599-HG, M7899-HG, MT759-HG, MT789-HG

## NEC Article® 517.16

### Use of Isolated Ground Receptacles

#### Edition

**2008:** As permitted in 250.146(D), shall be identified (visible after installation).

**2011:** Not permitted in Health Care Facilities.

**2014:** Isolated ground receptacles shall not be permitted in a patient care vicinity. However, can be used in other areas of the hospital.

#### Suggested Solutions

**Standard:** 8200-IG, 8300-IG

**Decora®:** 16262-IG, 16362-IG

**4-in-1:** 1254-IG, 21254-IG

**Lev-Lok®**

**Standard:** M8200-IG, M8300-IG, MT820-IG, MT830-IG

**Decora®:** MD820-IG, MD830-IG, MDT82-IG, MDT83-IG

## NEC Article® 517.18(A)

### General Care Areas - Patient Bed Location

#### Edition

**2008:** Each patient bed location must be supplied by at least two branch circuits - one or more from the normal system and one or more from the emergency system.

**2011:** Same as 2008 edition.

**2014:** Expanded marking requirements to include General Care Areas (formerly only required in critical care areas); clarified specific portion of essentially electrical system.

#### Suggested Solutions

Custom Wall Plates

## NEC Article® 517.18(B)

### General Care Areas - Patient Bed Location Receptacles

#### Edition

**2008:** Minimum of four receptacles per patient bed location, single or duplex type; listed as “hospital grade”.

**2011:** Permits use of quadruplex receptacles as part of the minimum receptacle requirement.

**2014:** Increases number of receptacles from four to eight.
