## Wire Construction Conductor: Suppression conductor composed of an aramid fiber strength member and coated with conductive latex measuring a resistance of $6500\Omega/m$ to $20000\Omega/m$ . The conductor is also coated with a pass of release agent for proper wire stripping. Core (First Pass): Suppression conductor insulated with a layer of EPDM rubber. The diameter of this layer ranges of 0.188" to 0.235" ±0.005" depending of the electrical requirements of the wire. Strength member: Fiberglass yarn braided around core material or a high strength synthetic mesh tape used between core material and jacket to strengthen finished product. Jacket (Second Pass): Silicone rubber extruded over core material and strength member measuring a diameter of 7MM ± 0.13MM (0.275" ± .005"). The silicone rubber provides the product with high temperature and chemical resistance. **Standards** This ignition wire meets the standards of ISO 3808 Class C. Type 3B.
