

The Ideal Terminal for Heat Shrink Connectors!

Long Neck Ring & Spade Terminals

Our Long Neck Terminals

- Long neck designed to be insulated with heat shrink tubing
- Long neck ensures proper seal
- Unique to NSPA

Standard Terminals

- Never designed to be insulated with heat shrink tubing
- Often a poor seal or tubing impedes stud hole

Visual Inspection

- 45° barrel allows installer to see wire is fully inserted and wire is crimped to barrel
- 45° barrel ensures wire is stripped proper length

No Visual Inspection

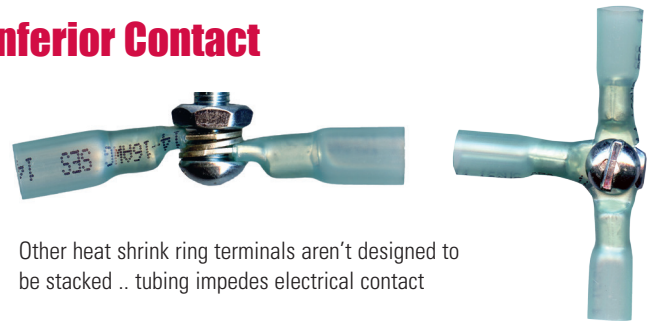

- Traditional barrel, user can't see that the wire is fully inserted so unsure if wire is crimped to barrel

Superior Contact

- Long neck allows ring terminals to be stacked with maximum contact

Inferior Contact

- Other heat shrink ring terminals aren't designed to be stacked .. tubing impedes electrical contact

Non-Insulated Long Neck Ring & Spade Terminals

- Color stripes
- Color coded to industry standard
- Stripes provide guide where to position crimp nest
- Brazed seam barrels - Seam will not open
- Electro Tin-Plated for corrosion resistance
