

Animal Repellent

ANTI-RODENT ADDITIVES:

got rodents?

Environmentally-friendly, patented bio-active ingredients effectively repel rodents.

Safe for humans and all other animals, anti-rodent additives help you avoid:

- Safety issues
- Productivity downtime
- Equipment damage
- Loss of revenue

Rodent damage is a significant issue, according to the additive manufacturer CTECH CORPORATION:

“...forty percent of mammal species found on earth are rodents.

The bright colours and texture of polymer, the aromatic odour of polymeric products and the plasticizers used are all responsible for animals being attracted towards plastic goods. In addition, Rodentia, an order of mammals also known as rodents, is characterized by two continuously growing incisors in the upper and lower jaws which are kept short by gnawing. Thus to satisfy their own need, they hamper our living.”

Reports on extensive testing from the manufacturer demonstrate that rodent aversion technology is “designed to keep the rodents away effectively and not kill the rodents or harm any other animal.”

Talk with one of our engineers or customer care for more information about this environmentally-friendly solution to a growing problem.
