

RADXL Metric FX

High Voltage Cable 600V HEV Single Core cables -70 to 150°C

RADXL metric FX is a high performance battery cable designed specifically for flexibility, high temperatures and long life. The future of battery cables will have to answer the demand for an abundance of electronics and components that will proliferate under the hood of the hybrid electric vehicles. RADXL metric FX battery cable fulfills these demands.

RADXL metric FX battery cable has an irradiated cross-linked polyolefin insulation (IRXLPE) able to withstand temperatures of 240°C and higher and is thinner and lighter than other conventional battery cables. In addition the high strand conductor allows for extra flexibility for easy routing yet tough enough to withstand the roughest environments. RADXL metric FX has the flexible of welding cables but our IRXLPE insulation system has a higher temperature rating allowing the use of smaller gage wires without sacrificing ampacity.

The end result is an automotive wire ideally suited to applications where a combination of flexibility, long life and performance is required. Save money and reduce weight by shortening the cable length. RADXL FX can be routed through twists and turns where other battery cables fail. Perfect choice for use in HEV vehicles.

Benefits and Features

Thin, uses up to 40% less space.

Very Flexible.

Meets requirements of SAE J-1654, SAE J-2183

SAE/USCAR-23

Fluid Resistant.

-70°C to 150°C Temperature Range

Superior Processing.

Applications

Including but not limited to:

Electric Vehicle

Hybrid Vehicles Starters

Batteries

Power Distribution

Ground Wire
